

Komfort Workspace

Komfort designs and manufactures the most extensive portfolio of partitions currently available in the UK. The vast choice of construction materials allows designers to create unique schemes from contemporary to traditional.

Partitioning Systems

Komfort's partitioning systems include:

600 Series: A 50mm partition system suitable for most general office applications. 600 Series is uncomplicated in its installation and many diverse schemes may be produced through choice of framework colour and panel decoration. It is available in both angular and radiused profiles.

Komfire 75/Kameo 75/Komfire 100: Functional 75mm partitioning systems with a choice of either angular or radiused componentry. Komfire also comes in double skinned form as a 100mm system to provide enhanced sound and fire performance offering up to 52dB (Rw) and 60 minutes respectively.

Klassic: A veneered system which can incorporate many different styles in both solid and glazed form. Klassic provides complete flexibility and relocatability together with ease of assembly. It is also suitable for applications where good sound and fire performance are required. To enhance the beauty of Klassic's natural materials and ensure continuity of finish, all the factory manufactured components are pre-finished in a clear lacquer.

Confluence: Confluence is a ground-breaking new partitioning concept from Komfort that produces seamless features. It comprises a comprehensive range of pre-cast solid plaster components that provide a seamless crisp engineered finish to a multitude of on site abutment requirements. Confluence is the perfect transition solution providing a precision interface between gypsum and glass walls, which would be virtually impossible to create using standard building materials. The patented profiles eliminate the need for complicated and visually intrusive detailing to create the perfect finish that many designers strive for. As a gypsum product it is totally natural and provides performance characteristics around fire, acoustics and thermal insulation.

Single / Double Glazed Polar: In its single glazed form, the system can be either silicone or dry jointed. It is virtually frameless, with no vertical posts between modules, corners or junctions. In double glazed form the system is totally relocatable as no silicone is used, even at glass-to-glass joints. Shared support to both panes of glass is provided by the unique 'ghost post'. Available in straight, faceted or curved glass modules.

Polar Vision: Polar Vision is one of the latest products to be added to the Polar range of glass partitions. It is dry jointed and constructed without mullion posts to give a seamless style. The system has been tested to achieve 30 mins fire protection for both insulation and integrity. There is a choice of door options from glass, in an aluminium frame, to timber in a timber frame. Depending on the glass combinations used, Polar Vision can provide up to 48dB (Rw) sound performance.

PolarTec: A double glazed partitioning system which has been tested to provide 30 minutes integrity and insulation for fire resistance; 47dB (Rw) for sound performance and 'Severe' strength to BS 5234. In additional tests it achieved the necessary standards to meet crowd pressure requirements. PolarTec is also demountable and relocatable. It is ideally suited for public areas with high volume traffic, in particular schools, colleges and universities.

Ls90: Ls90 is a bi-block system with a recessed head and base and a wide range of interchangeable panels types, from glazed to solid with a variety of finishes.

It has been designed for future change with deflection head and base tracks creating a fully relocatable system.

The Ls90 range features three distinct styles of finish -

Ls90 Elegance - Solid panels with enhanced acoustic, fire & aesthetic options

Ls90 Prism - Double glazed modules with encapsulated glass

Ls90 Reflections - Double glazed flush bonded modules

Single Glazed Polar with Walnut veneered door in aluminium frame

Back painted Ls90 and Double Glazed Ls90 with blinds and full height glass door

Confluence - Seamless Abutment Technology

The factory finished panels reduce on-site construction time and maintain the quality of finish. All panels are manufactured to the correct size prior to delivery, there is no cutting of materials on-site resulting in less disruption, dust and waste.

KM[®] StorageWall divides space, provides high volume storage and is totally flexible. Its relocatability and optimisation of floor space endorses KM[®] efficiency, cost-effectiveness and impressive storage capacity.

KM[®] integrates with other Komfort partition systems and can also divide offices by acting as a partition wall. The back panels are designed to be interchangeable with the doors and if required, can be demounted and relocated to another area.
