

Sandtoft Roof Tiles Ltd

Sandtoft has pioneered many of the most innovative advances in pitched roofing in recent years. Our range is the widest and most diverse in the industry stretching from traditional plain tiles, pantiles and slates to groundbreaking new labour saving designs.

In response to a growing demand for natural roofing products, we have developed a New Generation of clay roof tiles. These unique products reduce labour and material costs, cut completion times and satisfy both planning and environmental requirements.

We have also developed products made from 80% recycled slate which are manufactured in the UK's first carbon neutral tile plant. In addition by converting to 100% green electricity for all our UK operations we have reduced our carbon emissions by 25% per annum since 2006.

Sandtoft has launched the PV48 solar system. Designed for pitched roofs. PV48 incorporates black photovoltaic modules with virtually all types of slate or tile. It can be used on both existing and new build properties and installed by any roofing contractor.

Interlocking Clay Roof Tiles: New Generation

20/20 - Interlocking Clay Plain Tile

The tile's single lap design requires fewer tiles and approx 60% fewer battens than traditional plain tiles. Such savings lead to dramatic reductions in installed costs and make the 20/20 more cost effective than both clay and concrete plain tiles. The 20/20 has a new minimum pitch of 15°.

Rivius - Interlocking Riven Slate

Rivius features a riven surface and dressed edges that give it an authentic, natural slate appearance. Made from natural clay with a tough ceramic finish, this unique slate alternative will never lose its colour. With coverage of 10.5 slates per m² Rivius offers substantial material and labour saving benefits over natural slate.

Olympus - Interlocking Double Pantile

The most radical feature of the new Olympus clay tile is its size; at 10.2 tiles/m², this is the largest and most effective profiled clay tile launched in the UK.

Cassius - Interlocking Thin Leading Edge Slate

This thin leading edge clay tile creates an attractive natural clay roof, while its large format size and interlocking design reduces material and installation costs. Cassius cuts the cost of a natural clay roof, and can also provide a cost effective alternative to natural slate.

Recycled Slate & Slate-appearance Tiles

The innovative use of natural materials to maximise performance and aesthetics, as well as to reduce installation costs, is what characterises Sandtoft's slate range. Manufactured in the UK's first carbon neutral tile factory, using natural recycled UK slate, the company has created a range of interlocking and double-lap slates that satisfy the wish to use natural materials. In addition, a range of highly aesthetic slates made from natural clay is also available.

BritLock is a lightweight, fully interlocking single lap tile which offers savings through faster and easier fixing. Made with 80% recycled UK slate.

BritSlate is a lightweight double lapped slate made from 80% recycled UK slate.

Technical Services

Our technical services team are available to assist you in designing and specifying a roof using Sandtoft tiles or slates in accordance with the latest legislation and Building Regulations. We offer a vast library of standard data on our web site; alternatively we can provide bespoke information, calculations and details to meet your needs.

See www.sandtoft.com for details of our slate and concrete ranges.
