

# Air Conditioning Solutions

## Space Airconditioning plc

### The Company

Established in 1980.

Space Airconditioning plc, based in Guildford, Surrey is the largest of Daikin Europe's extensive network of independent distributors, and longest established of only 2 official distributors operating in the UK.

Space Air is able to offer complete system design capability, schematic drawings, product training, dependable after-sales support and hold excellent finished goods and original part stock. Space Air also produces a comprehensive range of mechanical and electrical accessories, many of which are unique and fully complement Daikin's heating, cooling and ventilation equipment.

Award winning Space Air is acknowledged as one of the industry's foremost suppliers of air conditioning and heat pumps. The company is registered to the ISO 9001:2008 (Quality) and ISO 14001:2004 (Environmental) standards.

### Daikin

Established in 1924.

Daikin Air Conditioning is part of the giant Daikin Industries. Renowned for innovation, energy efficiency, high quality and reliability, Daikin products destined for the European market are manufactured in Belgium, the Czech Republic and Italy.

Daikin Industries are unique as they are not only one of the world's largest manufacturers of air conditioning equipment but also fluorochemicals; this has placed them at the forefront of developing sustainable refrigerants for use in air conditioning, heat pump and refrigeration equipment. Daikin leads the field in high efficiency low/zero carbon, renewable energy heat pump technology.

### Heat Reclaim Ventilation System (HRV)

80% total heat recovery.

The innovative Daikin HRV system efficiently exchanges temperature and humidity between supply and exhaust air. This process recovers energy losses (sensible and latent heat) and can considerably reduce the air conditioning load.

This system is ideal for both commercial, including the education sector, and residential applications and can be used independently or in conjunction with Daikin Chilled Water, Sky Air and VRV systems. Models are now available with built-in DX coils and humidity control.

### Split & Multi Split-Systems (Air to Air)

2kW ~ 17.5kW

Ideal for small to medium sized properties of all types including offices, shops, restaurants, bars, schools or residential, these inverter controlled systems can operate up to five indoor units from a single outdoor cooling unit only or heat pump unit for year round comfort.

Operating with the safe, stable and efficient HFC R-410A and incorporating inverter technology, these systems offer industry leading performance and efficiencies.

A wide range of compact and extremely quiet indoor fan coil units are available, including the remarkable new self cleaning round flow cassette, the stylish Emura wall unit and the new 'radiant' heat panel Nexura.

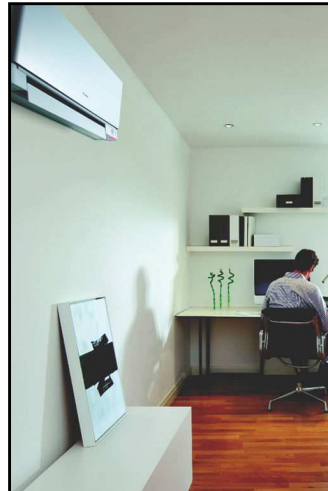

### Free RIBA approved CPD Seminars

Space Air is pleased to offer free RIBA and CIBSE approved CPD seminars, which provide information on current air conditioning and heat pump (air/air and air/water) technologies and the latest standards and regulations.
