

# Wade International

A privately owned UK company with more than 45 years experience in the industry, Wade is established as a leading manufacturer of quality drainage products. Much of the success of the business is attributable to an on-going commitment to put technology to practical use, to generate fresh ideas and to guarantee quality assured production.

Wade offers a comprehensive range in which choices of material, size and style enable the specifier to select products that will meet his/her requirements.

## Product Range

**Floor Gullies** versions are available for use in finished or unfinished floors, with trapped or non-trapped body of cast iron or PVC, and with grating or cover of nickel bronze, polished bronze, cast iron or stainless steel; bodies are easily connected to all pipework in general use.

**Roof Outlets** Wade offers a range of roof outlets with versions for use with different types of roof construction (warm, cold, inverted, no fines screed) for installation in different types of deck (concrete, metal, wood) with different types of waterproofing membrane (mastic asphalt, built-up felt roofing, single ply).

**Access Covers** sometimes referred to as cleanouts or rodding eyes, complement wall and floor finishes. Versions are available for use in unfinished floors and in floors finished with ceramics, vinyl, marble, paviers, terrazzo, carpet or wood. Most covers are sealed; SuperSeal covers have additional benefits of being quick release and double sealed.

**Drainage & Sheet Floor Covering** Wade has developed a range of channels, gullies, gratings and covers specifically for use with flexible sheet floor covering, such as vinyl and with certain trowel-applied resins. Unobtrusive clamping ensures a watertight seal, yet gratings / covers are removable for access to pipework without disturbing the flooring material.

**Linear Drainage** comprises stainless steel channel, available in a range of profiles to fit a range of gratings of stainless steel, nickel bronze or cast iron. Versions are suitable for specialised applications such as fire-fighting lifts, thresholds, hidden channel and where dual-level drainage is required.

**Actimatic Grease Converters** permanently convert the grease in waste water from kitchen and food processing operations into water soluble, biodegradable products. A mains powered Automatic Dosing Unit is an option being more frequently called for.

**Non-Freeze Water Points** provide an external water source for plant watering, area cleaning, vehicle wash down and similar activities.

## Quality

Certification of compliance with BS EN ISO 9001 underlines the Wade commitment to quality and service.

## Service

Technical advice and further product information is available from the Wade Technical Services Department at Halstead, Essex, from Wade Technical Consultants located throughout the UK and from selected distributors worldwide. A free lecture/seminar service is available for schools, colleges and professional organisations.

Factory tours and CPD sessions on drainage topics are available by appointment.

## Information Technology

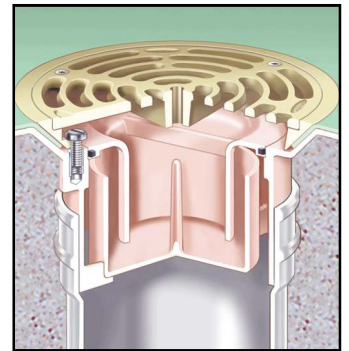

Version 2.3 of Wade Drainage Products on CD-ROM contains an interactive electronic catalogue which enables the user to build specifications of compatible products for a selected application, as well as our PDF format Technical handbooks.

Wade-CAD is included for users who require drawings of Wade products; files are in both DXF and AutoCAD DWG format.

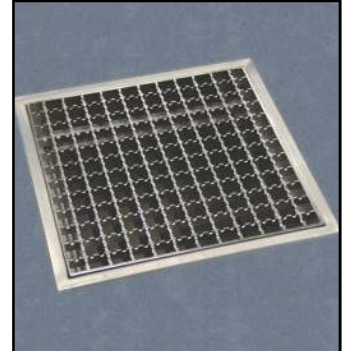

Visit our website for online versions of the electronic catalogue, price list, Wade-CAD and PDF format Technical handbooks.
